

1. Technology 3.1 The Middle East and Africa Region
2. Project Name 3.1.49 Assessment of water treatment facilities in the Middle East, and support the upgrade
3. Keywords Middle East, Water treatment technique, Investigation
4. Objectives/ Contents This project includes the assessment of existing water treatment facilities for oilfields in the Middle East and the support for surveys on the addition of equipment for repairing, refurbishing, and upgrading the facilities when necessary. A significant number of years has passed since the start of operation of the water treatment facilities, so it is now impossible to treat some wastewater. On the other hand, wastewater is increasing year by year, so additional equipment is required, and the demanded quality of treated wastewater has recently become higher. Accordingly, it is necessary to consider new water treatment technologies. We comprehensively researched these issues, and support the task of giving appropriate proposals.
5. Reference This project was commissioned by member companies.
